```
The invention relates to an isolated variant allele of a human kappa opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (MCOR) sequence appearing as ANNOSOS, where the variation comprises C852T, C948T, C1008T or their combinations. Also included are comprises C852T, C948T, C1008T or their combinations. Also included are a isolated mucleic acid molecule selectively hybridising to the variant, a cloning vector comprising the variant and an origin of replication, an expression vector comprising the variant and an origin of replication, and expression vector comprising the variant and an origin of replication, and commerced or an allele in a bodily sample taken from a subject rhe hKOR variant allele is useful for determining a susceptibility in a subject to at least one physiological response, condition or disease related to the endogenous opioid system, learning, memory, cognition, pain, occaine, camphetamine and other stimulants self-administration, behavioural sensitisation to cocaine, opiates, alcohol and tobacco, opiate, amphetamine and alcohol withdrawal, physical dependence and tolerance; camphetamine and alcohol withdrawal, physical dependence and tolerance; neuroendocrine function, reproductive function, prolactin regulation, stress responsivity, physiology and pathology of mood and affect, immune the stress responsivity, physiology and pathology of word and allele is useful for determining a therapeutically effective amount of therapeutic agent to order to induce analysis in the subject induce amount of therapeutic agent to a subject to a subject and is useful for mount of therapeutic agent to a subject to a subject subject or amount of therapeutic agent to treat the a least one additive additive additive and an expectation and an experience and account of therapeutic agent to treat the a least one additive additive and an experience and tother and and account of the argument and an experience and tother and acco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

The invention fractes to an isolated variant altere of a number Kappa opticid receptor gene, comprising as ADN30505, where the variation of variation in a fully defined wild-type allele of human kappa opticid variation. (RON3) sequence appearing as ADN30505, where the variation of comprises C852T, C948T, C1008T or their combinations. Also included are an isolated nucleic acid molecule selectively hybridising to the variant, as allowing vector comprising the variant and an origin of replication, an expression vector comprising the variant and an origin of replication, an expression vector comprising the variant and an origin of replication, an expression vector comprising the variant and an origin of replication, an expression vector comprising the variant and an origin of replication, an expression vector comprising the variant as a suspectively with the vector and a commercial test kit for determining the presence of at least one physiological response, condition or disease related to the at least one physiological response, condition or disease related to the and petendin specification, pain, cocaine, amphetamine and other stimulants self-administration, behavioural camphetamine and alcohol withdrawal, physical dependence and tolerance; neuroendocrine function, reproductive function, prolactin regulation, stress responsivity, physiology and pathology of mood and affect, immune function gastrointestrial function. The hKOR variant allele is useful for determining a therapeutically effective amount of pain reliever to authors amount of therapeutic agent to administer to a subject and subject in order to induce analgesia in the subject in the amount of therapeutic agent to a treat the at least one additione determined and algebra of the pain and allele is useful for the allele and subject to treat the at least one additione and algebra.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated variant allele of human kappa opioid receptor gene, useful for determining susceptibility in subject to physiological response, condition or disease related to endogenous opioid system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8q11.2.                                               The present invention describes a vector for delivering an opioid receptor to a nerve cell. The method comprises a sequence encoding an opioid receptor and a vector backbone. Also described: (1) a cell comprising the vector or its integrated product; (2) an animal comprising the cell; and (6) an animal producing the vector or the animal producing the vector of the animal producing the vector is administering the cell; and (6) an animal produced by the process of administering the vector to the animal. The vector is useful in preparing a composition for reducing pain in a subject. The present sequence encodes the human kappa opioid receptor, which is used in the exemplification of the present invention. The human kappa opioid receptor gene is located on chromosome 8, more specifically to 8q11-12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New vector for delivering an opioid receptor to a nerve cell comprising sequence encoding a mu-opioid receptor and a vector backbone, useful in preparing a composition for reducing pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                 opioid receptor; nerve cell; analgesic; gene therapy; pain; human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated variant allele of a human kappa opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (RKOR) sequence appearing as ADN30505, where the variation comprises (BSZT, C948T, C100RT or their combinations. Also included are a loning vector comprising the variant and an origin of replication, an expression vector comprising the variant associated with a promoter, a unicellular host transformed/transfected with the vector and a commercial test kit for determining the presence of at least one variation in a hKOR gene of an allele in abodily sample taken from a subject. The hKOR variant allele is useful for determining a susceptibility in a subject to at least one physical response, condition or disease related to the

stress responsivity, physiology and pathology of mood and affect, immune function, gastrointestinal function. The hKOR variant allele is useful for determining a susceptibility to pain in a subject and is useful for determining a therapeutically effective amount of pain reliever to administer to a subject in order to induce analoguesia in the subject. The hKOR variant allele is useful for determining a therapeutically effective amount of therapeutic agent to administer to a subject suffering from at least one addictive disease to treat the at least one addictive disease to treat the at least one additive disease. The gene for hKOR is located on chromosome 8q11.2. The present sequence is the C852T allele of hKOR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     420

The invention relates to an isolated variant allele of a human kappa opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (MCOR) sequence appearing as ADN30505, where the variation comprises C852T, C348T, C1008T or their combinations. Also included are a isolated nucleic acid molecule selectively hybridising to the variant, an isolated nucleic acid molecule selectively hybridising to the variant. CC a cloning vector comprising the variant and an origin of replication, an expression vector comprising the variant associated with a promoter, a unicellular host transformed/transfected with the vector and a commercial test to determining the presence of at least one variation in a hKOR cyariant allele in a bodily sample taken from a subject. The hKOR variant allele in useful for determining a susceptibility in a subject to at least one physiological response, condition or disease release endogenous opioid system, neciception, neurotransmitter release endogenous opioid system, learning, memory, cognition, pain, cocaine, amphetamine and other stimulants self-administration, behavioural campetamine and other stimulants self-administration, behavioural campetamine and alcohol withdrawal, physical dependence and tolerance; enciced surficial susceptibility to pain in a subject and is useful for determining a therapeutically effective amount of pain reliever to deminister to a subject in order to induce analgesia in the subject. The how wariant allele is useful for determining a therapeutically effective amount of therapeutically effective amount of therapeutic agent to read the analgesia in the subject. The mount of therapeutic agent to read the analgesia in the subject in order to induce analgesia on the present sequence of the sease to treat the at least one addictive disease to treat the at least one addictive disease to treat the at least one addictive disease to treat the at least one subject in order to induce as subject and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               420

The invention relates to an isolated variant allele of a human kappa opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (MCOR) sequence appearing as ADN30505, where the variation comprises C8527, C948T, C1008T or their combinations. Also included are comprises C652T, C948T, C1008T or their combinations. Also included are comprised to comprising the variant and an origin of replication, an expression vector comprising the variant associated with a promoter, a cloning vector comprising the variant associated with a promoter, a cut-cellular host transformed/transfected with the vector and a commercial test kit for determining the presence of at least one variation in a hKOR contract allele is useful for determining a susceptibility in a subject to at least one physiological response, condition or disease related to the endogenous opioid system, learning, memory, cognition, pain, cocaine, amphetamine and other stimulants self-administration, behavioural camphetamine and alcohol withfrawal, physical dependence and tolerance; camphetamine and alcohol withfrawal, physical dependence and tolerance; converses responsivity, physiology and pathology of mood and affect, immune converse responsivity, physiology and pathology of mood and affect, immune converse responsivity, physiology and pathology of mood and affect, immune converse responsivity, physiology and pathology of mood and affect, immune converse responsivity, physiology and pathology of mood and alcohol withfrawal, physical determining a therapeutically effective amount of therapeutic agent to and pathology and therapeutically effective amount of therapeutic agent to administer to a subject and is useful for manditive amount of therapeutic agent to treat the at least one additive disease.

The converse of the administer to a subject suffering from a daniance of the converse of the converse of the converse of the converse of the converse of the converse of the converse o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

The invention relates to an isolated variant allele of a human kappa opioid receptor gene, comprising a DNA sequence having at least one variation in a fully defined wild-type allele of human kappa opioid receptor (hKOR) sequence appearing as ADN30505, where the variation comprises C852T, C948T, C1008T or their combinations. Also included are a isolated nucleic acid molecule selectively hybridising to the variant, a cloning vector comprising the variant and an origin of replication, an expression vector comprising the variant associated with a promoter, a unicellular host transformed/transfected with the vector and a commercial cet test kit for determining the presence of at least one variation in a hKOR gene of an allele in a bodily sample taken from a subject. The hKOR variant allele is useful for determining a susceptibility in a subject to at least one physiological response, condition or disease related to the endogenous opioid system, nociception, neurotransmitter release endogenous opioid system, learning, memory, cognition, pain, cocaine, amphetamine and other stimulants self-administration, behavioural variant allele is useful for determining a therapeutically effective sensitisation to cocaine, opiates, alcohol and tobacco, opiate, amphetamine and alcohol withdrawal, physical dependence and tolerance; neuroendocrine function, reproductive function, prolactin regulation, stress responsivity, physiology and pathology of mood and affect, immune function, gastrointestinal function. The hKOR variant allele is useful for determining a susceptibility to pain in a subject and is useful for determining a therapeutically effective amount of pain reliever to administer to a subject in order to induce analgesia in the subject. sensitisation to cocaine, opiates, alcohol and tobacco, opiate, amphetamine and alcohol withdrawal, physical dependence and tolerance; neuroendocrine function, reproductive function, prolactin regulation, stress responsivity, physiology and pathology of mood and affect, immune function, gastrointestinal function. The hKOR variant allele is useful for determining a therapeutically effective amount of pain reliever to administer to a subject in order to induce analgesia in the subject. The hKOR variant allele is useful for determining a therapeutically effective amount of therapeutic agent to administer to a subject suffering from at least one addictive disease to treat the at least one additive disease. The gene for hKOR is located on chromosome 8q11.2. The present sequence is the G36T allele of hKOR.

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides are also useful in detecting the CC antibodies are last outselful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, call regeneration-related diseases, e.g. AIDS, Alzheimer's disease, atheroselevosis, bacterial, fungal, protozoan or viral infections, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host classase, parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory conservation, renal disorders, rheumacioid arthritis, rauma, ulcers, or any other disorder in which GPCRs are involved The antibodies may be used in immunoassays and immunodishes, absides in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the articular in the arti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present relates to a method for identifying a compound for treating urological disorders e.g., urinary incontinence including overactive/ overseemistive bladder, overflow urinary incontinence, stress urinary incontinence caused by dysfunction of the bladder, urethra or central or peripheral nervous system, prostatitis, benign prostatic hyperplasia, cancer of the prostate or kidney disorders. The method is also useful for modulating hyperplasia in a cell and treating a subject having a urological disorder. The invention is also used in gene therapy. The present sequence is human kappa opioid receptor 1 (KOR) DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method of determining whether a patient will respond to treatment with a farnesyl transferase inhibitor (FTI), by analyzing the expression of gene that is differentially modulated in the presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B)-6-[amino(4-chlorophenyl) (1-methyl-1H-imidazol-5-yl)methyl]-4-(3-chlorophenyl)-1-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           661 IGGIGGGACCTCTICAIGAAGAICIGCGICTICAICTTIGCCTICGIGAICCCIGICCIC 720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              73
